The Center for Sustainable Tourism at East Carolina University is an interdisciplinary research center comprised of many diverse university academic and non-academic units.

The purpose of the Center is to promote and support the adoption of sustainable practices throughout the tourism industry whether business, government or individual traveler behaviors.

This is done through graduate level education, academic research, and community engagement and outreach.

RETI

Renewable Energy in Tourism Initiative
www.renewabletourism.com

RETI is a multi-institutional collaborative effort that aims to facilitate the expansion of sustainable energy practices among members of the tourism industry.

Two key objectives:

- Provide support for tourism businesses in the form of research, education, technical assistance, and case studies in energy conservation and application of renewable energy technologies to improve business performance.
- Establish a permanent renewable energy and tourism university program to cultivate new innovation in the field of renewable energy and communicate these opportunities to current and future members of the tourism industry.
